Reporting

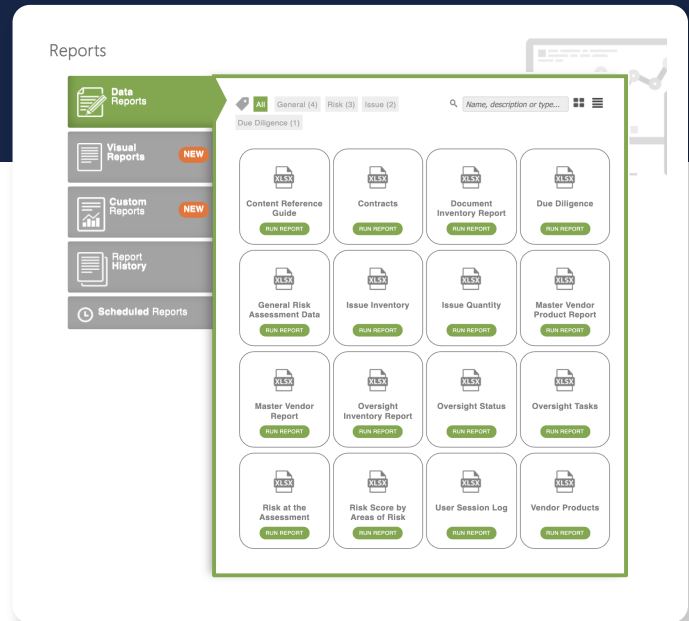

Utilize meaningful, easy-to-use reports to provide clear visibility into your vendors.

Overview

You may get asked questions or need to find out particular information related to specific vendors, areas of third-party risk management or your overall program. Reports help show answers. Ad-hoc, manual reports are time-consuming, challenging and have room for error.

Venminder's Reporting Module enables you to take all your centralized data on third parties and turn them into valuable, customizable reports that drastically increases visibility and allows you to make better informed decisions on vendors and your overall third-party risk management program.

You can track status, trends, exceptions and more via reports that are downloadable in both data (Excel) or visual (PDF). Reports can be made for different roles – whether it's for the team, management, board or examiners.

Venminder's Third-Party Risk Management Platform allows you to turn data into valuable customizable reports that will allow you to make informed decisions on your vendors.

Key Benefits

Increase reporting accuracy on your vendors and third-party risk management program

Because data is in the platform, it will take manual labor out of the reporting equation and provide accurate data, through visual and custom reports that you can create.

Improve vendor monitoring

Through automated reports, you can schedule reports to be emailed on an ongoing basis in order to monitor the latest vendor data without having to be in the system.

Access reports that cover the entire vendor lifecycle

The platform covers the entire vendor lifecycle, this includes reporting. Reports cover due diligence documents, contract data, due diligence tasks, risk assessment data, vendor and product profile data, issues, service level agreements and more.
